

# I SUFFERED OF PSORIASIS AND I HEALED WITH MEDICINAL PLANTS

## Prologue

Psoriasis is a skin disease, frequent which raises difficulties of treatment, at the start of the third millennium. It is present in the village and city.

The disease isn't contagious. Its apparition can be at any age, even from childhood. Its evolution is chronic. Sometimes the Psoriasis elements resist in all the life of the patient.

The specific elements of the disease with red lesions that appear almost symmetrically, especially on arm, knee the skin from the head. In time they can appear in other places (member's superior and inferior), if it's generalizing it means it is a form of generalized Psoriasis.

The base of the treatment it is the one with ointments, creams or solutions based on cignolin etc. This has a local effect, sometimes really fast. But the reappearing is more often and more intense, sometimes even after they give up the treatment with ointments. That's why some patients have to continue the treatment with ointments, even if those have negative effects sometimes.

Using the Deniplant tea from the Medical Foundation "The Help", tea licensed by Mr. Gheorghe Giurgiu, the president of the foundation there was healing and disappearing of the lesions in only 6-12 months. The treatment with Deniplant can be used sure, without other prepares or diet.

Even if the treatment with Deniplant is for long last it is easy to be used by the patients at their one homes. and till now there are no negative effects.

All the 500 patient who've pass to the foundation can say that this treatment "Deniplant" really has the positive answers that every patient wants.

This is why the foundation received this name "Hope", to give the patient the hope that he will heal, even if the doctors say that the disease can't heal.

The patient has the right to know that in Romania a product that could help him.

.DR. ION GHEORGHE

Principal scientifically researcher

Primary Doctor- General Medicine

## Note of the author

From the beginning I would like that the reader to not be upset on me for the fact that being patient in reading all this rows he didn't find the essential elements that made me give the title of this work. This happens because of the element, which is the object of an invention, and you can't know it.

I wrote these with the wish that they will mean a moral help, a shining of help for the people who suffer of the sickness named Psoriasis. They should have trust in this treatment with plants (Fitotherapy), they will find out that the new medicine can't help.

By saying, "I was sick of Psoriasis" I entered in a wanted contradiction to the actual, new medicine. All the doctors have told me, as they tell to the all other patients, that this sickness is hopeless, without realizing that they make something to the patients. If in the case of a man with cancer the doctor doesn't tell to the patient that is hopeless why don't they us this in the case of the man who suffers of Psoriasis?

The way I used and the time which passed (over 17 years), time in which the sickness didn't reappear, make me consider right to say, "I was sick of Psoriasis". All the doctors have told me that the sickness might appear even after 15 to 20 years and that this isn't a healing and just a temporary amelioration. But I permit to make a comparison not very opportune. If by getting cold and after the treatment, I get cold once more and after coming winter I get cold again, could I say that cold is a helpless disease? Even if this comparison is a little bit forced I just wanted you to know that now there is a treatment which treats the intern causes of the Psoriasis and this skin disease can be healed or at least ameliorated for a long time. THE DENIPLANT TEA EXISTS! I agree that there is the possibility of getting sick again.

I will treat again with the tea and I will get healed for other 20 years.

Wouldn't you, the man suffering of Psoriasis, be content of this?

## My own case

For proving what I wrote till now I'll start with my own case. the first part of the sickness was in the time I was at the military hyschool. I couldn't get good accommodation there for the fact of the privations. Far home, far parents, moving in a small place surrounded by high walls, the impossibility of getting down town when you want, executing strict activities that I had to manage with. On this fond was also the problem of a professor which in time of 3 years, every trimester was giving me bad marks and I was in a rough situation but in the last day I was promoted. Isn't this a stress to live in the third trimester to know that you might be expelled. So every trimester, every year I took little by little poison and my organism couldn't resist any more. That's how I got Psoriasis.

At first I had lots of treatments with ointments. I was healed for a short time but after they appeared again. Especially the stress factor as always present.

After the military hyschool I went to the officer school where I had to manage with a bigger stress and more privations.

After the first year of school, my organism didn't respond well to ointments, my organism was depending on ointments.

I had to take the treatment with ultraviolet razors, after a year of treatment, in the next year 1980 the razors didn't have any more the effect from the first use. The sickness was on my whole body. That's why I had to do, time of 2 months, PUVA razors. After this treatment the lesions have healed in a proportion of 95% staying only some points in the places where the lesions were.

Going in a trip in Vrancea, an old lady recommended me to read a book about traditional Romanian medicine "Healing and remedies for sicknesses".

I took that old book and I copied word by word and that's how I found out about the great remedies of fitotherapy.

At first I didn't believe but the words of that old lady stayed into my mind "Try this healing too cause you have nothing to lose."

And I listened to that old lady's advice, I started reading that book for hundreds of times and I started looking for the plants and making different mixtures. And the results appeared in the sense that throwing ointments I could handle to resist with the natural treatment and without diet.

So it appeared Deniplant Tea.

After this treatment I noticed that the lesions didn't form any more and the points were disappearing easier. That was the first sign the first hope that I made, which told me that I will heal.

I can't say that everything worked great, as I wanted cause the treatment was a continuous research and a continuous experience. There were moments when the organism didn't answer with the same fastness, as I wanted. After all my research (on me) I found out that even if I will double the treatment the sickness won't heal faster. The organism reacts on his own rules.

At first I did an alcoholic extract and a decoct which I combined. But to consume some boiled plants, which don't have even a good taste, from day to day, from month to month, wasn't what I really wanted.

Even if I saw that the skin was healing herself, without ointments or diet I had the temptation to use ointments to escape of the plants, cause I was sick of them. Then I realized that I was fooling my self cause the lesions were reappearing.

After, I found out that by introducing all the plants in the decoct it were better results but my organism was sick of plants. So I thought I could do something so the taste could be better and I could manage easier with it. That's how I introduced lemon in the treatment. By introducing lemon I got a really good refreshing drink. I didn't agree with putting aromas more or less natural, for correcting the taste of the tea as many teas are made.

Then I tried to change the Deniplant tea into effervescent pills, so it could be much easier to use. But my research got that a part of the vegetal products used by be can't be copied synthetically and the ones that can be copied can give adverse reactions.

That's why I thought that it would be better if I would let the Deniplant tea in its original plants mixture and forest fruits 100% natural so there won't appear later any bad manifestations and so the sickman won't have what to be afraid of.

But the diet, I say that I had no restrictions, even if in that book was recommended this. It's also true that my menu was improved with fruits and vegetables but I didn't interdict myself the other foods. I eat even pork food, beef, chicken, fish, all I wanted, so I had a normal life. I remember that at first I didn't drink any alcohol. I said that everything will be much better. But, by the coming of the winter celebrations and the fact that I consumed alcohol in normal quantities I realized that the treatment wasn't affected. From that moment I realized that I mustn't be deprived of this aliment, cause alcohol consumed in normal doses can be an aliment.

That is how I managed to finish the treatment until the real disappearing of the lesions. But you mustn't believe that this happened after night.

There were months, even years (two years and a half) time in which I drank daily this tea.

And from that time (there are over 15 years) I had no problems with Psoriasis.

Until the year 1993 the problem of this sickness didn't interest me. There were only too persons, which I helped to heal. Some friends told to license this product and to help more people and I decided to do this and that's what I did.

After obtaining the license of Deniplant, I tried to see if this treatment gives results to the other persons too and I found out that this is possible. So almost 70-80% from the persons who did this treatment with Deniplant had positive results. But there was 20-30% in which the organism didn't answer. So if after a month or two you don't see any results, the organism still depends on ointments, the results will be negative.

There were persons who fixed their problems in 5-6 months, but there were persons which are over three years of treatment. I found out that at children the healing was faster then at adults, at grown-ups the organism answers slower.

From the cases I saw that the treatment's evolution is the next :

- in the first(as I said) you mustn't use any more ointments or other medicines for intern or intern or extern use.

As you get on the lesions to force the healing and their falling the surface gets bigger and you heal slower. That is why I tell every patient that is better to not scratch the lesions and don't force the falling of the lesions.

Attention! In the moment when all the lesions of the surface of the skin disappear, you mustn't interrupt the treatment immediatly you must give up in steps, a day yes, a day no time of two months. If in this time don't appear any points you can give up this tea forever. This thing is really important cause there is the possibility that the skin is healed but the intern problems aren't.

Even if there are some many years from the time I saw the efficiency of the Deniplant tea, but this gets on the market now, cause I waited to see if this gives results. I won't talk here about the fixed cases so you to not understand that I try to make commercial. I am convinced that you will do the commercial after you will convince of this true and you will want to help other people.

If my theory has some misses, this doesn't mean that the other patients and I can't say that we didn't heal of Psoriasis.

To true what I said and to give trust to the ones who want to use Deniplant I decided that the people who will contact

me at 0744 82 78 81 will receive two boxes of tea at the price of one.

So Deniplant which is unique in the world will be also unique by its offer.

For other things you can contact me and you will certainly receive the waited answer.

In the ending I will present the way of using Deniplant, which you must respect it so you could have positive answers.

## Fitotherapy

"Fitotherapy was from ever"

Fitotherapy, addressing sometimes to chronic sick people, means a long last treatment, with respecting, in the same time the other medical indications.

First dates say that Summeriens were using medicinal plants in therapeutic ways are in 6000(before our era). They were describing many plants used by them for healing.

In antiquity Hipocrat, the best known doctor wrote "Corpus Hipocraticus" in which he was describing over 200 medicinal plants.

Arabians were the first who obtained medicaments (drug) from plants as tea, syrup or cataplasms.

Even Herodot, shows us that Dacians were knowledge and used plants for preparing different healing.

So in a copy of the "De materia medica" written by Dioscoride in the first century of our era, we find 24 dacian names of plants.

The Latin poet Vergilius, referring to the variety of plants from seaside of the Black Sea, was saying in one of his works that "The Pont gives healing" and "Lots of herbs the Pont gives".

If our ancestors were using medicinal plants according tradition, today their using is scientific, on different laboratory bases and research. But fewer specialists are really interested. So you see that in the Third millennium we have to use the Romanian traditional medicine. Is this forever?

## The basic principles of Fitoterapy

At the base of the therapeutically value of plants sits the relation between chemical structure of active substances and their farmacodynamic action on the elements of the body. Some plants have farmacodynamic proprieties for the fact that almost all the medicinal plants have a complex chemical composition, starting from two or three compounds to twenty or thirty substances identified chemically. Then, if we use the medicinal tea that contain different active substances, the farmacodynamic action will be higher. In other cases, not only the mistaken association can take you to unsuccessfully therapeutics.

From this dates it gets that the first principle of fitotherapy is that the medical product has to be good for the body. All the plants used for the Deniplant tea are good for the organism and don't give adverse reactions at long use.

The second principle is that using species of plants more adequate to the treatment of the sickness of the patient, acting on tolerance. For obtaining some therapeutically effects in Psoriasis is necessary a long last treatment respecting a few indications.

The third principle is that for respecting a diet and other therapeutical factors. In this case, I started from the idea that the human body must not be privet from different kinds of food with strict diets in which some aliments are allowed and some are not. The man couldn't live a normal life in this way. And it exists the possibility in which the sickness can reappear if you interrupt your diet. That's why I respected only half of this principle in the sense I had a normal life, normal alimentation but no excesses.

So Fitoterapy doesn't address to the disease but to the man who suffers of it.

By getting sick of Psoriasis and having the perspective of many cases which couldn't solve I remembered what the famous therapist Ovidiu Bujor said about the human body and the way that plants action on it: "The human body actions and seems to look like a mechanism that one time couldn't function perfectly. By trying to take this mechanism to its original state, we had to discover that ensemble, which have caused the (cold of the motor).

In the case of the machine the operation is simple, we exam every piece until we see which one of them produces the problem.

In the case of the human so that the <car could function it should be checked the whole state of the cells, cause the sickness is at the level of the cells.

## Medicinal Plants

A French magazine published in the year 1977 a long study named "Plants that heal". The author said that selecting medicinal plants rarely went to bad results that happened cause there wasn't held the opinion and the experience of traditional healers. This takes a part for at least 50% from the success of the operation. It is a big mistake, said the author, to ignore the popular experience in this line of therapy. The obtains of good results in using plants in therapeutic ways is based by the quality of plants which is conditioned by their contain of active substances, this contain is determinate by genetic factors from the specie, from the moment of plant obtaing to the way of drying and conserving and the last of the plants.

For first, for the obtain of a prime quality matter we have to recognize the plant's organ with the higher level of active substances (roots, rhizoid, aerial parts, leafs, flowers, fruits and seeds).

For the second, about the containing of active substances is the time of recollecting which is conditioned by the state of vegetation of the plant, (before blooming, in bloom, and the season).

In generally medicinal plants are recollecting on dry time, in the morning, after the drops are evaporated or in the afternoon before the appearing of the sun. Or there can be plants like menthe which is better to be recollected after the disappearing of the sun. For not destroying some species and to continue they're growing at recollecting you must take

care of some things. Even from fruits we will let some quantities which will assure the healing of the plant. Also, about the way that extracts from plants are good you must take care of the way of using and the right quantities. Medicinal plants can be, as the affection we use them in, for intern or extern use. In my case there were for intern use. Also you must take care of the way you use teas in order with the principal meals.

## Vegetables and fruits adjuvant in natural therapy

Today is already known that lots of diseases can be ameliorated or even healed with the help of a mixed alimentation and in which vegetables and fruits must be on top.

The principle proprieties of them are for the fact that they contain, like medicinal plants, lots of active substances. These are volatile oils, glissades, flavonids, enzymes, antocians, sulfured compounds and minerals.

Vegetables and fruits are important also for their containing of vitamins, nutritive factors and catabolic. Except the vitamins D and B12, which are in, low quantities, the other vitamins A, C, B1, B2, B6 can be found in different quantities. Know I'll talk about different nutritive proportions of fruits and vegetables.

From the therapeutic virtues of vegetables I remember you that telina and cicoarea are aperitifs, ridichile and salate are laxatives, sparanghelul, prazul, melons are diuretics, garlic and ceapa are viermifuge.

Glucose, levrose and fructose are an important sours of energy for the organism. From the fruits, macesele have diuretic proprieties and antiseptics, gutuile have astringent proprieties, emollients, prunele have stimulate proprieties of the nervous, detoxifiants.

Lemon, oranges, grefruits are exotic plants which play an important place in the cellular metabolism.

Vegetables and fruits can be consumed ca atare or prepared in different juices.

## Apitherapy

If in the past, honey and the other apicole, were used in completing and improving the man's food, today they are used also at healing the diseases of people and preventing different the pain and the suffering of human. Bees add to the primitive product, ferments, enzymes, substance bactericide, bacteriostatic, which have conferred some therapeutic virtues.

The apicole products can be used shared in two groups. Apicole products natural and direct like honey, ceara, propolis, polen, pastura, laptisorul de matca, bee poison and apilarnilul.

The apicole products natural but indirect like hidromelul, the honey otetul, turtele and honey cookies. Creams with ceara and cosmetics based on apicole products.

Honey, compared with propolis and the matca milk is efficient in affections of the digestive tube, the liver and in insomnia.

Honey can be used simple or plus tea. I used for sweetening the teas that I consumed daily sugar, but, from the after studies and the experience of other sicken, I found out that it is more indicated to use honey.

## Water as a therapeutic agent

Water represents one of the most perfect solvents which nature produced. She represents almost 2/3 from the containing of the human body. An adult who's height is 70 kg there must have at least 50kg of water in his structure, 50% of the hydride compound is in the cells, 45% in the intercellular spaces and only 5% in the blood.

Like in nature where water is in a continue circulation there's the same with the human body. With the help of skin we loose 50ml a day, through breathing we loose 350ml a day and through urine 150ml.

For regularizing the intestinal track the natural medicine recommends, or consuming a teaspoon of water every half an hour or the same doze from hour to hour in the interval lunch evening.

## The power of thoughts

### Factor of Psihotherapy

The old Indian and Chinese medicine say that a really important reason is the thought roll in authority in awful disease etc.

People are taken by their own thoughts. And the release gives to the man divine power so that's why a big accent is on controlling bad thoughts.

The fear thought has the most terrible on humans. And other thoughts make fear, un-safety of the next day, affect the organism but they don't destroy it as the fear thought does.

The bad thought or fear are from individual causes or general causes. On the individual causes I won't stop cause there are also for the bad education of the thought

The general cause is the stress, more in urban areas, stress caused by noise, infected air and intoxicated atmosphere.

Different treathnings, terror movies, a polluted culture, contaminated water and consuming synthetic foods and drinks. Even if the stressing elements can be changed by changing the medium, the bad thought can be eliminated only by reeducating.

The general method of eliminating bad thoughts and especially fear is optimism, laughing, and happiness.

By reading this rows, I'm sure that you will ask how can a man who suffers of Psoriasis can be happy and smiling.

Of course I didn't do this from the first but with the time I realized that the treatment is good, I became optimistic, and I said to my self that there's just a matter of time.

A physic disease will attack the mind and a mental disease will attack the good functioning of the body. There can be depressions of some nerval centers and the blood can get poisoned with all the chime esentions released in the time of the negative shock or the bad thought.

I will end this chapter with a last example about autosuggestion. Lots of people by the passing of time they start saying, "I'm getting older and sicker". These thoughts create big halls. The sickening of the vessels and the hair's falling etc. By keeping a good disposition and the young thoughts which help the body every moment and younging it. By thinking we have 18 years our cells will remake the nucleus and we will have again the tonus of a teenager. Being sick of Psoriasis, the thought that the treatment will give us amelioration, the healing won't be late in appearing. These observations are from my own experience and from the discussion with other patient that used Deniplant. I got to the conclusion that this acts on intern which make this disease appear and from this reason it isn't necessary to treat the exterior cause there is a really thick relation between the intern organs and skin.

In this way I can remember:

- Tiroide influences in a big measure the physic aspect of the sickness ;
- The hipofunction of the Suprarenal gets to pigmenting skin (the Addison disease);
- The secretion of the Gonadols regulates the aspect in function of sex and the evolution of some diseases like Acne;
- The affections of liver influence the color of the skin.;

Everybody knows that a substance put on the skin, in 24 it goes with our blood in the whole body. That is why is very important to take care of what ointments or solutions for extern use, you take. Of course I've met grave cases in which interrupting from the first moment. They used cream, simple alternating with ointment, then only the cream and In the end they didn't have to use the cream. That's how they realized that their organism responded to this treatment and the skin is healed.

Commanding formulary

If you decided to do the treatment with Psoriasis, I recommend you to contact the producer, so he could hold evidence and your product would be assured, cause some plants are hard to be find.

Complete this formulary and send it on this address:

## Alternative medicine

### A MAN FIGHT AGAINST PSORIASIS

Gheorghe Giurgiu was sick of Psoriasis, and what he suffered impulsion him for making this autoexperiment. He put passion on this way and after lots of spended hours, he created a tea that gave him the waited healing. At the international Exposition for New Tehnics Inventa97' which was from 17-30 may in Bucharest. He received the golden medal. The Deniplant Tea is a powder of plants, which is good in psoriasis.

The method in Mondial Premier it could save lots of sick people from Romania and the whole world.

It could... cause Mr.Gheorghe Giurgiu needs logistic support, trust from the local medical community and conditions for organizing another parallel experiment. It's much? It's less? We don't know. What we know is that the author of this natural heal against a sickness without real allopathic healing, he's not a doctor, he's not a biochemist. He's just an autodidactic which by all the suffering and his creativity, he could become a pioneer of modern tehnic in healing this sickness. Now days the sickness is treated with ointments, violet razes, PUVA razes or drugs for intern use that only ameliorate the lesions. They don't action against the intern cause, cause they don't know the therapeutic way, and that is why the sickness reappears.

With the help of the medicinal plants from the Romanian fauna, without associating this treatment with medicaments or diet, Mr. Giurgiu can action on the mechanisms that generate this sickness. The discovered product has proved his therapeutic valor in other dermatological causes affections like Lupus Eritematos or Zoster Area. It wouldn't be the first time when a Romanian invents a product that can evolute the limits of the human knowing. It won't be bad for anyone if this generous promision to be transformed into hope for sick people of Psoriasis, Lupus Erimatos, Zoster Area or burns of the skin. The interest of some foreign patients in this product could cost us loosing the paternity on this product.

It wouldn't be the first time when we loose what we have!

That was said, and "God bless you" as it helped me.
